Objectives

To create an efficient e-banking system through implementation of comprehensive end-to-end solutions.

To create a coherent system by creating a smoothly working banking system.

To encourage a paperless environment by covering end-to-end activities yet providing enough control over different transactions.

Problem Statement/ Topic Description

Creating a Bank Management System using tkinter as the GUI Application.

Although the basic type of services offered by a bank depends upon the type of bank and the country, services provided usually include:

- Taking deposits from their customers
- Issuing current and savings accounts to individuals and business.

Abstract

- Simple console-based total application developed using python programming language.
- A user can create an account by providing the basic information
- Developed to carry out the transactions and processes easily and quickly, which system can perform faster than manuals systems.
- Provides the simplest management of bank account. In short, this projects mainly focus on CRUD.

Introduction

The Bank Account Management System is an application for maintaining a person's account in a bank. The banking management system is almost digital it is convenient for both bankers and users to manage e-banking there are different models of bank management systems as per the policy and requirement of the business.

- Open Source, Easy to use
- Consists of standard attributed dimensions, fonts, colors, cursors, anchors, and bitmaps for better GUI.
- Consists of a variety of methods like pack(), grid(), and place() for geometry management.

Description

1. Create Account

- Includes Labels and Entry Boxes for basic user info inputs
- Values from the Entry box is accessed using get()
- After all validations are met, the details are stored in a text file once the submit button containing the submit function is pressed..

2. Log-In

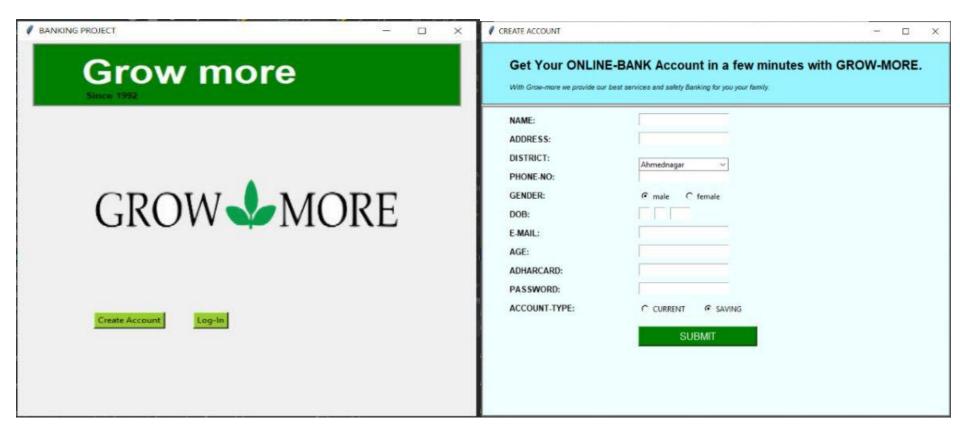

- Includes Labels and Entry
 Boxes that inputs details to get in through the user's profile.
- Admin and User's Login
- After all validations are met, the user is then taken to a page where all transaction facilities are met.

3. Money Transaction

- Username is fetched through the text file using the read/ write mode in file handling.
- The updated balance is credited or debited into the user's acurrent ccount balance.

Acknowledgement

We have great pleasure in presenting the mini project report on "Bank management system using tkinter". We take this opportunity to express our sincere thanks towards our guide Prof.Merlin Jacob Department of Computer Engineering, APSIT thane for providing the technical guidelines and suggestions regarding line of work. We would like to express our gratitude for his constant encouragement, support and guidance through the development of the project.

We thank Prof.Sachin Malave, Head of Department, Computer Engineering, APSIT for his encouragement during the progress meeting and for providing guidelines to write this report.

We wish to express our deep gratitude towards all our colleagues of APSIT for their encouragement.
